

Version 6

Fact Sheet

Historically, email archiving solutions have been the domain of IT. Configuring a search and providing results for review required a Compliance, Legal or HR manager to make the request to IT.

Web-Based Business Applications

ArchiveOne V6 removes the back and forth requests between these managers and IT by providing simple, easy to use web-based consoles, enabling business managers to conduct their own searches.

IT resources are not used up conducting business search requests. A simple yet powerful, web-based interface enables business users to be self-sufficient.

The streamlined interface ensures that only the elements required for specific business processes, such as eDiscovery are provided.

The reduced dependence on IT allows cost savings and productivity gains to be realised.

Dashboard

The Administrator now has an 'at a glance' view of the state of the archiving solution, including:

- ▶ *The status of each service*
- ▶ *Indicators, charts and metrics about how much data is being queued or processed at each stage.*
- ▶ *Automatic update of charts, giving a real-time visual of the system at work*
- ▶ *Textual descriptions that allow visibility of the current status of each stage*

The single page view gives an insight into the current system's health and activity. Summary information determines what actions and/or processing are currently in progress.

Legal Console

Searches can be simple keywords, or more complex multi-field criteria matching, with Boolean and proximity operators (for more advanced users).

Users get the benefit of:

- ▶ Search term highlighting in the results
- ▶ Web based preview of the message, including access to the attachments
- ▶ The ability to place results on Legal Hold, if appropriate

Audit Console

Administrators can now take advantage of enhanced auditing capabilities, providing more granularity than other systems and allowing an in depth view of the full lifecycle of an email item.

Each step that an item goes through in the archiving process is recorded and available, i.e. Identification, Indexing, Compression, Committal and Stubbing, as well as all aspects of subsequent retrievals. This provides a full chain of custody of an email.

Enhanced auditing is coupled with a new 'Audit Console' Web Application, which allows reporting, searching and filtering of data. It enables Administrators to fully understand what has occurred throughout the system and even to the level of each individual email item.

Other Features

Full 64 bit and Outlook 2010 support

The need for complex rollout planning, where manual decisions are required over which client version which user needs, is now completely removed. There is still only a single installer for each client component. ArchiveOne simply examines the user's system which will automatically determine which module to use and ensure that the correct one is installed.

Deployment Analyzer

This is used to check that hardware, infrastructure or Microsoft hotfix changes do not cause the ArchiveOne solution to malfunction. The solution can now be optimized for maximum throughput and performance.

PST Management

A web based, simple progress bar reports on processing status.

Feature Focus

Legal Console

- ▶ *Search Archive(s)*
- ▶ *Filter results*
- ▶ *Add legal hold to results*

Dashboard

- ▶ *'At a glance' view of the state of the archiving solution*
- ▶ *Provides insight into the system's health/activity*

Audit Console

- ▶ *In depth view of the full lifecycle of an email item*
- ▶ *All policy execution is audited*
- ▶ *Each archiving stage is recorded/available to item level*
- ▶ *Provides full chain of custody of an email*
- ▶ *Web application allows reporting, searching and filtering of data*

64 bit/Outlook 2010 support

- ▶ *Full support for all current versions of Outlook, including 32 bit and 64 bit versions for Outlook 2010*

Deployment Analyzer

- ▶ *A self-updating analysis feature for Administrators to check that their system is configured correctly and is adhering to best practices*

Full Exchange 2010 SP1 support
